

CourierNavigator

Courier Navigator is the most progressive development in top end courier software solutions... Whatever your style of courier process, **Courier Navigator** is the most streamline solution for your business. It will save you time and more importantly money in the day to day running of your courier business.

As a web based application you can access your business twenty four seven from any online location. A plug play solution that provides you with all the technology required to run your courier business., **Courier Navigator** is an ideal application for the aspiring courier company, right up to the larger courier businesses sending in excess of 20'000 packages a month..

The Application...

"Our focus on customer care and consistent investment in our product is what separates us from our competitors. The huge functionality of Courier Navigator reflects our commitment to our clients"

Daniel Blackwell – Coda Commerce

"The overall benefits we hoped to achieve by implementing a new operating system were not only met, but surpassed. The ability to adapt the system to our requirements and your input to expand on these ideas before implementing them has been extremely refreshing and appreciated. The importance of your constant availability to deal with our queries quickly and efficiently cannot be underestimated. The thought of changing from one courier system to another was a daunting prospect, but with your assistance it was made reasonably straight forward and with little difficulty. We now regret not taking this opportunity sooner."

P O'Toole - Associated Air Services

'Courier Navigator is the solution for you!'

Courier Navigator can handle any type of courier business.

Same Day

Same day bookings operate on a town or postal code (PAF) system to refine collection and delivery addresses. Integrated mapping provides routing mileage to price deliveries. Courier Navigator also handles fixed price point-to-point deliveries.

Overnight

The Courier Navigator system has integrated PAF data for the UK. All overnight deliveries price themselves upon the geographic point of delivery. This area of the system is highly configurable, you are able to assign multiple overnight carriers to the system to include their geographic pricing structure and also weight based pricing structure.

International

Countries and cities (destinations) can be fully configured to match your company's global service levels (international tariffs). Each country or city can be individually tailored to a client's tariff structure. Special services such as 09:00 deliveries can be configured to each city or country. All international bookings assign themselves to delivery agents for manifesting along with the associated charges from each agent.

Customer Area

Customers are able to utilise an online booking area for real time job updates and make booking requests to the systems. Clients also have access to copy invoices and historical job information.

Your Clients

For all three parts of the system, International / Overnight / Same day, each of your clients can have multiple types of discounts based from the systems standard tariff or you can create framework tariffs which may only be assigned to a few special customer accounts. Invoice formats can also be specified per client.

Operations Department

An important part of any courier software is the ability to process packages in short periods of time. Your ops team will be able to utilise Courier Navigator's operational functionality to ensure your consignments are routed to the correct supplier, placed on the applicable service, checked weighed and manifested.

We have integrated our solution with some of the biggest names in the courier world... all designed to simplify your integration and use of Courier Navigator.

Drivers – PDA's

Courier Navigator mobile application allows you to assign collections directly to the drivers PDA. POD signatures can also be captured and sent back to the system to automate the POD process within the system. Vehicle Tracking and Tom Tom navigator are two popular additional options for the PDA. When installed the vehicle tracking will show controllers where each driver is in near real time (typically between 1 to 15 seconds delay).

Accounts Department

Courier Navigator operates a centrally run accounts department for your business. This is beneficial for companies with multiple offices which may form part of a franchise set up. Courier Navigator allows for multi formatted invoicing and the electronic sending of invoices. Driver statements, uploading of supplier invoices and sales person commissions plus a wide range of company reports are also accessible from this comprehensive section of the system.
